

AUVSI (Association for Unmanned Vehicle Systems International) held its Unmanned Systems 2014 conference in Orlando, FL. The event, which brings together more than 8,000 attendees from over 55 countries, welcomes the biggest influencers in the unmanned vehicle industry. The event presents an opportunity to learn about important issues, advancements, and opportunities in the unmanned systems and robotics industry through more than 100 technical sessions, panels and workshops featuring the industry's top speakers and leading experts. Attendees can also explore the latest technology on the market from more than 600 innovators.

senseFly was lucky enough to be included as one of the innovators sharing technology in the exhibit hall. It was a great opportunity to introduce the eBee to the 8,000 attendees.

John Irving of Caron East, the first US partner of senseFly, shared, "The senseFly eBee UAS is changing the way that professional mapping is being done. The eBee has so much potential in so many areas of business: agriculture, road construction, right of ways, oil and gas, stock pile volumes, timber, development and the environment...just to name a few. Caron East, Inc. is proud to be part the first partner of senseFly in the USA. We are excited to bring this state-of-the art technology to this country and enjoy working with customers from many different markets to provide knowledge and training on the senseFly drones."
